Data Stream and Object Architectures

AFPC Font Typeface Registry (FGIDs)

AFPC-0016-01

AFPC-0016-01
First Edition (July 2011)

This edition applies is the first edition produced by the AFP Consortium™ and replaces and is based on the IBM® FGID registry that was previously maintained by IBM Corporation. This edition remains current until a new edition is published. This publication also applies to any subsequent releases of Advanced Function Presentation™ (AFP™) products that use the AFP architectures until otherwise indicated in a new edition.

AFPC Font Typeface Registry

Preface

This document was originally an IBM Standard, but was removed from the standards process on June 30, 2000. The FGID Registry is now maintained for AFP products by the Advanced Function Presentation Consortium (AFPC). This registry contains the Font Typeface Global Identifier (FGID) and associated summary information for each font typeface which has been registered. The registry has become quiescent so that no further FGIDs will be assigned.

AFP Consortium™

The Advanced Function Presentation (AFP) architectures began as the strategic, general purpose document and information presentation architecture for the IBM Corporation. The first specifications and products go back to 1984. Although all of the components of the architecture have grown over the years, the major concepts of object-driven structures, print integrity, resource management, and support for high print speeds were built in from the start.

In the early twenty-first century, IBM saw the need to enable applications to create color output that is independent from the device used for printing and to preserve color consistency, quality, and fidelity of the printed material. This need resulted in the formation, in October 2004, of the AFP Color Consortium™ (AFPCC™). The goal was to extend the object architectures with support for full-color devices including support for comprehensive color management. The idea of doing this via a consortium consisting of the primary AFP architecture users was to build synergism with partners from across the relevant industries, such as hardware manufacturers that produce printers as well as software vendors of composition, work flow, viewer and transform tools. Quickly more than 30 members came together in regular meetings and work group sessions to create the AFP Color Management Object Content Architecture™ (CMOCA™). A major milestone was reached by the AFP Color Consortium with the initial official release of the CMOCA specification in May 2006.

Since the cooperation between the members of the AFP Color Consortium turned out to be very effective and valuable, it was decided to broaden the scope of the consortium efforts and IBM soon announced its plans to open up the complete scope of the AFP architecture to the consortium. In June 2007, IBM's role as founding member of the consortium was transferred to the InfoPrint Solutions Company, an IBM/Ricoh joint venture. In February 2009, the consortium was incorporated under a new set of bylaws with tiered membership and shared governance resulting in the creation of a formal open standards body called the AFP Consortium (AFPCTM). Ownership of and responsibility for the AFP architectures was transferred at that time to the AFP Consortium.

Trademarks

Explanation of Reference Terms

Registered Font Typefaces

The tables on **pages 1 through 45** are summaries of the Font Typeface Designs that are registered. The only item registered is the FGID and the associated Font Typeface Name(s) as used by the implementing product(s). More than one Font Typeface Name may be associated with a given FGID, if the names correspond to implementation variations of the same design.

Additional information in the tables on **pages v through vi** was extracted from the registration application and is only for reference. No guarantees are made to the accuracy of this additional information.

03840 – 04095	X'0F00' – X'0FFF'	Reserved (Customer Use)

AFPC Font Typeface Registry

Scalable, Fixed or Proportional: 4,096–53,247 (X'1000' - X'CFFF')

To provide a convenient method of locating FGID numbers within this section, the following subsections group the assigned FGID numbers by their Design Classification. The Font Typeface Registration allocates FGID numbers 4,096 to 53,247 for Fixed or Proportional Designs, with no sub-allocation of those FGID numbers for particular Design Classes or Subclasses. Therefore, the following subsection headings all refer to the full range of Proportional Design FGID numbers, not just the range actually used within the subsection. Product implementations should not design code which is dependent on the sub-allocations implied by the range of FGID numbers actually assigned within any of the following subsections.
