

AFP Consortium

Future Summit

**Fogra CM Symposium
15th Anniversary of ICC
Munich, 21th-22nd February 2008**

Presented by

**José La Rosa Ducato
Exec. Dir. Software development**

Océ Printing Systems GmbH

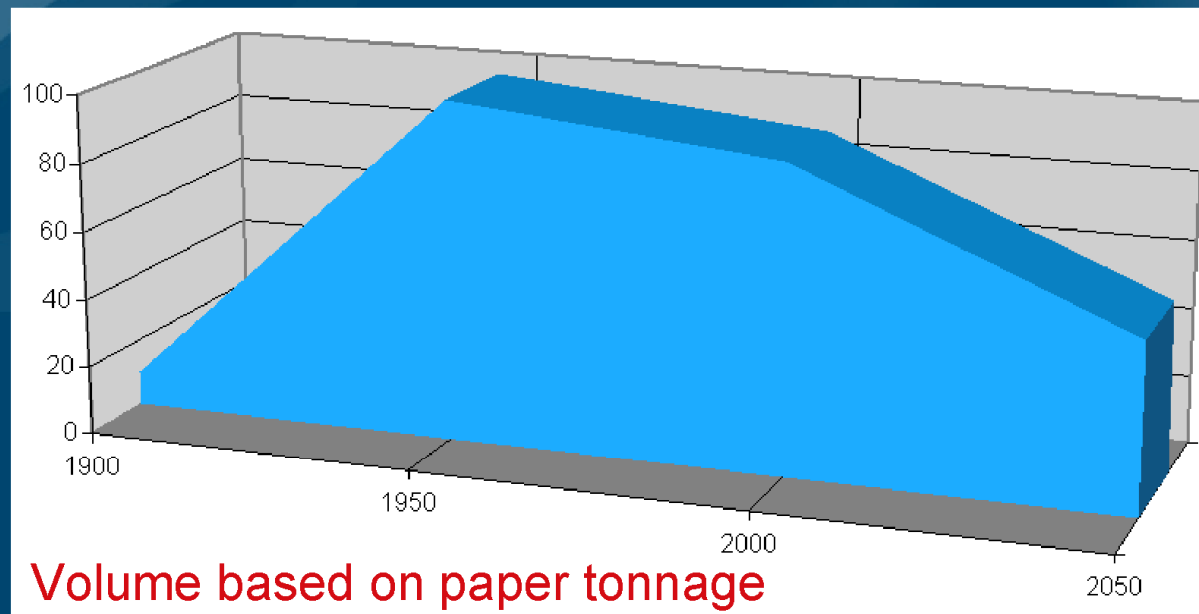

2008 AFP Consortium. All rights reserved

Agenda

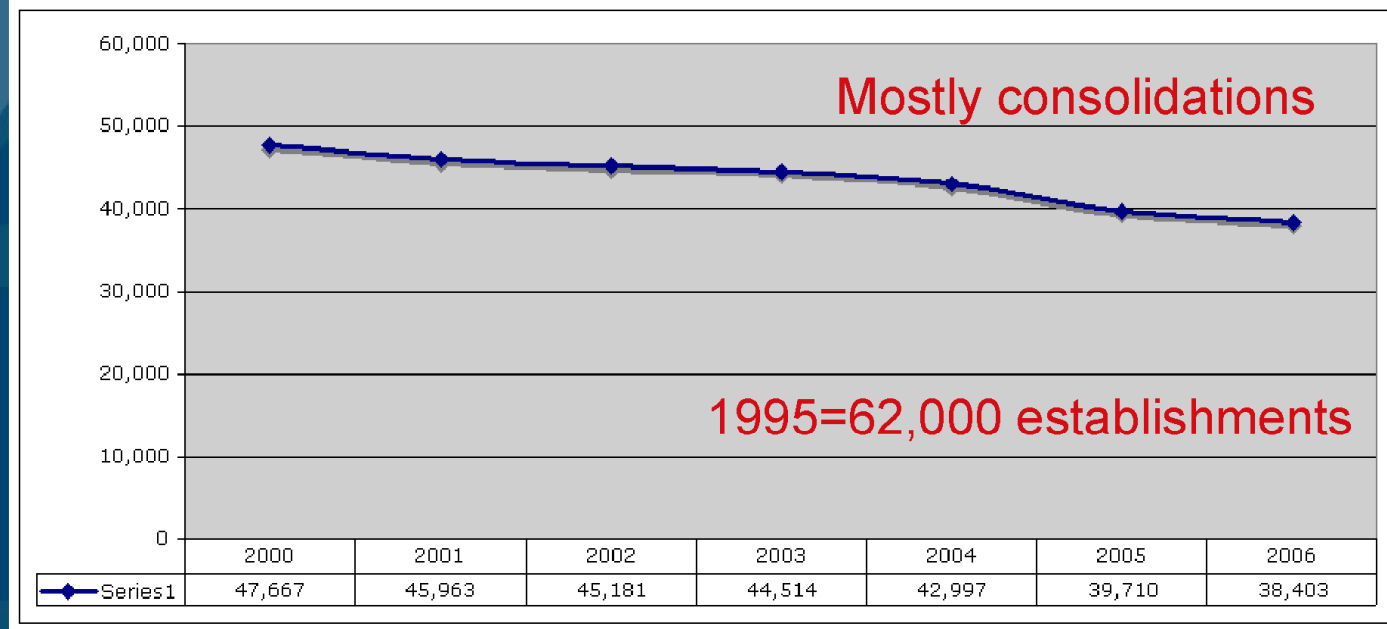

- **Where are we ?**
 - Printing today
 - The coming challenges
- **What is AFP ?**
 - The AFP approach
 - The AFP Consortium
- **What's to Come ?**
 - “Back to the Future”

Print volume

Decline in print establishments

Decline in employees

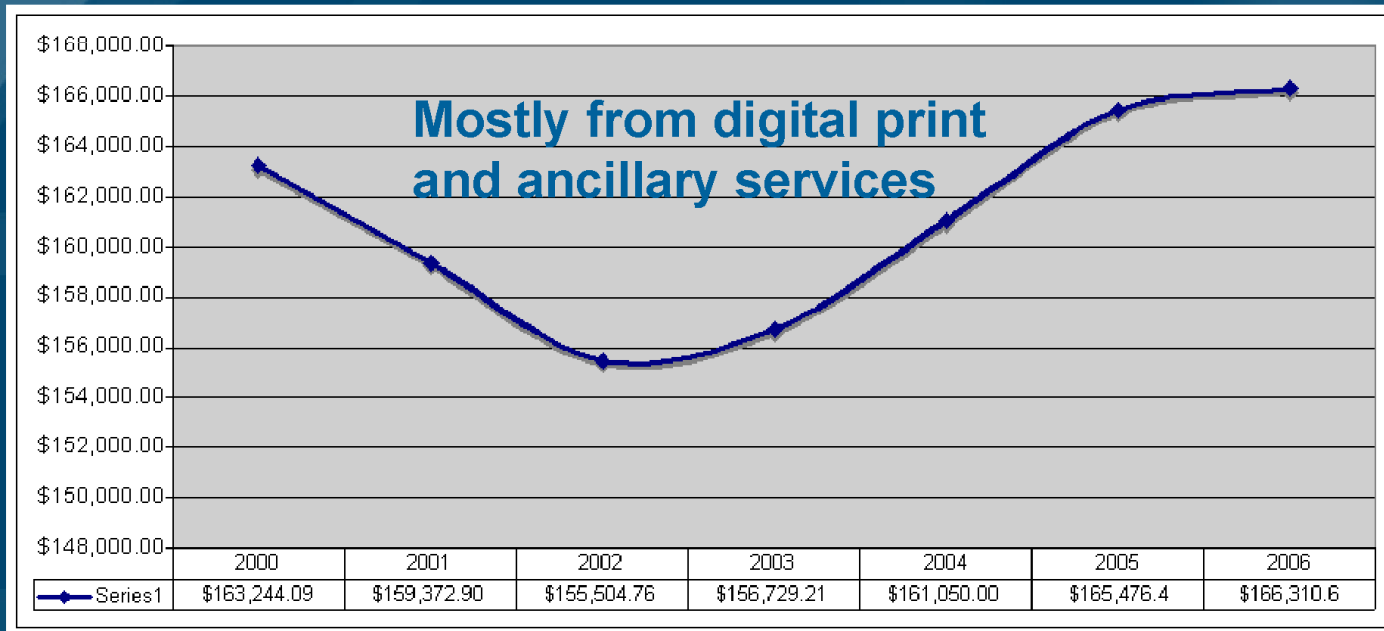

4

But . . . An increase in revenue

5

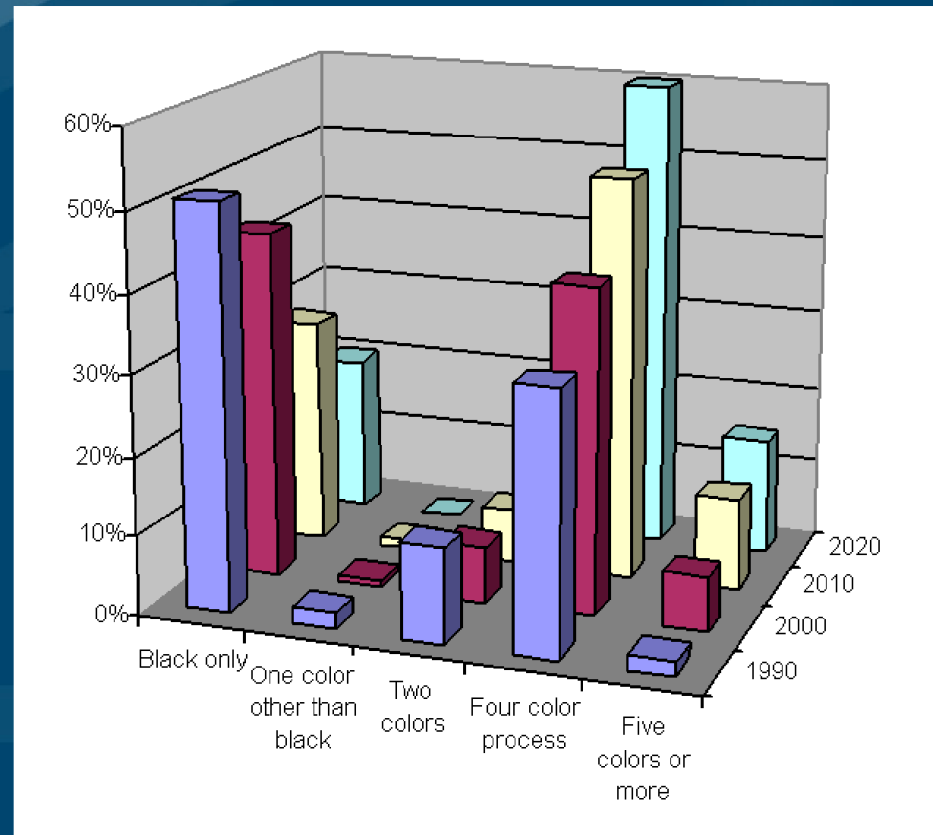

Source: "The Future of Printing", Frank Romano, Adobe eSeminar 2006

Digital print is the growth engine

6

Color reproduction is growing

8

Digital printing affects all products

Most digital print is collateral and direct mail

The coming challenges

- Extreme short run lengths, ...
 - Book on Demand
 - Personalized / 1:1 products
 - Legal / Financial / Transactional reports -> TransPromo
- ... including personal, sensitive data, ...
 - Confidentiality, integrity, liability -> Tracking
- ... require high speed rips, ...
 - Rip once, print ~~many~~ once -> Workflows
- ... and automated workflows for very high data volumes
 - ~~Print job = 10.000 copies of a 10 standard-pages brochure (10 pages of data, 10 Mb)~~
 - Print job = 10.000 copies of a 10 personalized-pages brochure (100.000 pages of data, 100 Gb)

The AFP approach

- **Advanced Function Presentation, ...**
 - Wide industry support in Finance, Legal, Transactional products
 - Billions of pages generated annually
 - Mature, robust standard with proven 22+ years experience
- **... specialized in 1:1 personalized data, ...**
 - For extreme short runs -> Performance
 - Used to print checks and financial documents -> Confidentiality
 - Complete document accounting / tracking -> Integrity
- **... for high speed production printing, ...**
 - Extensive support of reusable resources -> RIP once
 - Page / Object structure allows streaming -> Print while RIP
- **... in b/w, spot and full process color workflows**
 - Reusable color attributes / objects -> ICC profiles

The AFP approach

- Open Architecture, ...
 - Created by IBM in 1984, opened to the industry in 2006
 - Wide, still increasing industry support (see AFP Consortium)
- ... supports media and finishing intents, ...
 - Media and finishing requirements specified directly in the data stream
 - Provides maximum flexibility for large, very high volume, variable jobs
- ... with low device dependency, ...
 - IPDS (Intelligent Printer Data Stream) as device independent protocol
 - Unrestricted backwards compatibility to insure investment protection
- ... for late binding workflows
 - Keep your job device independent -> max. flexibility
 - AFP may carry TIFF, GIF, EPS, PDF objects -> Compatibility

The AFP Consortium

- Started in 2004 as AFP Color Consortium, ...
 - Goal: develop comprehensive color management for AFP architecture
 - Initial membership: 16 hardware and software manufacturers
 - First release of AFP Color Management Architecture (ACMA) in 2006
 - Published and available on the Consortium's web site:
www.afpcolor.org
- ... extended in 2006, ...
 - To include all AFP Object Content based architectures:
MO:DCA (documents), AFP Line Data, GOCA (vector graphics),
BCOCA (barcodes), FOCA (fonts), IOCA (raster images),
PTOCA (text), IPDS
 - Initial AFPC membership (2006): 31 hardware and software manufacturers
- ... in order to
 - Develop AFP into a best-of-breed presentation architecture

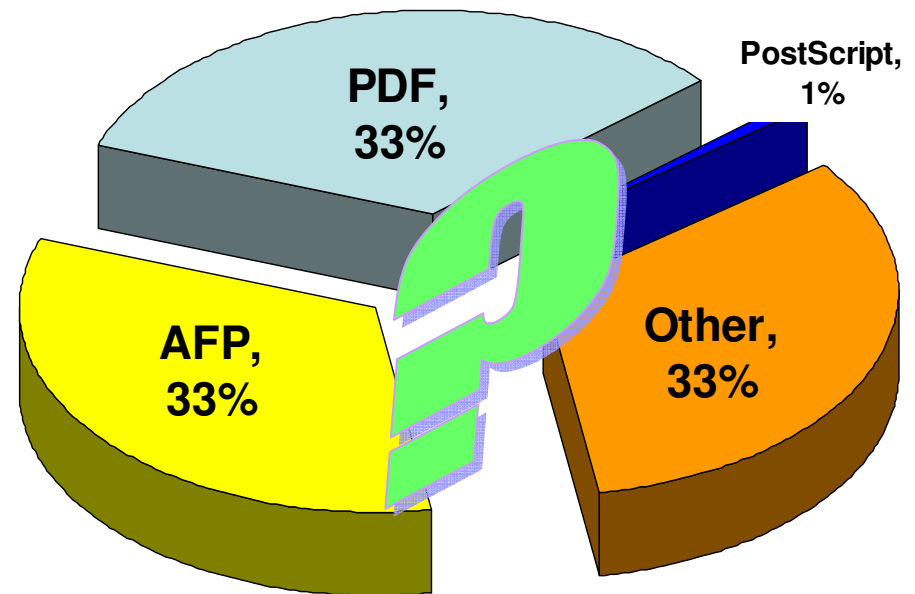

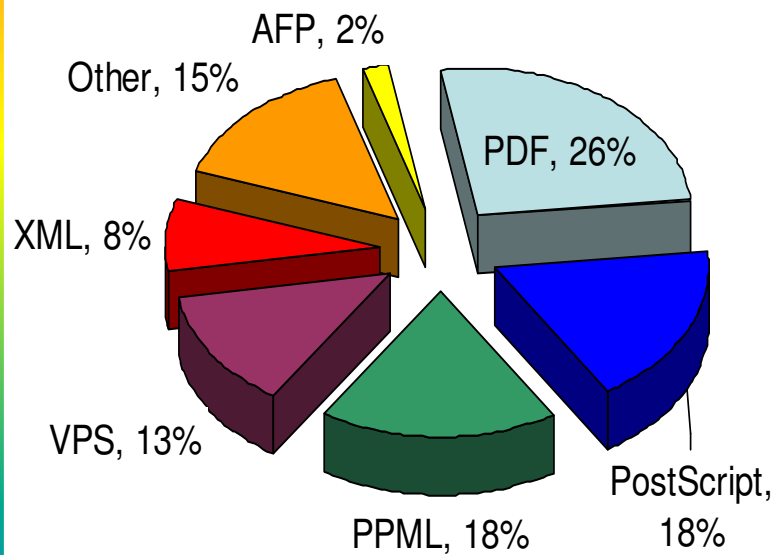

Current AFP Consortium Membership

- **Printers & Controllers**
 - InfoPrint Solutions/Ricoh
 - Kodak
 - Lexmark
 - Oce
 - Punch Graphix
 - Xerox
- **Servers & Transforms**
 - CDP Communications
 - Compart Systemhaus
 - Crawford Technologies
 - Emtex
 - IBM
 - Intermate
 - LRS
 - MPI
 - Solimar Systems
 - Xenos Group Inc.
- **Document Composition & Resource Creation:**
 - Cincom
 - COPI
 - CRE-DO
 - DocPath
 - Document Sciences
 - Elixir Technologies
 - Exstream Software
 - GMC Software Technology
 - Pitney Bowes Group I
 - Invaris
 - Inventive Designers
 - Isis-Papyrus
 - Metavante
 - PrintSoft
 - RenderX
 - Skywire Software
 - StreamServe

What's to come (polarizing statement)

- “Back to the Future”
 - AFP as standard for Full Color, Very High Volume, Variable Data, Production Printing

Output languages used for CVDP
in Commercial Print in 2006
